Summary

I'm a second-year undergraduate student passionate about earth sciences, with a particular focus on natural resources, energy geoscience, and groundwater and hydrology studies. I'm fascinated by how earth systems — from glaciers to ocean currents — have influenced human history and shaped societies over time, and I enjoy exploring the overlap between geoscience and the social sciences. I'm an active public speaker and enjoy breaking down complex ideas for general audiences. Outside academics, I play kabaddi competitively, which has taught me a lot about teamwork and staying focused under pressure.

Projects and Research Experience

NeuroHTz*Business Plan and Ethics***2024 - Current***IISER Kolkata*

» Co-founded NeuroHTz, a neurotechnology startup focused on developing machine learning based early detection for neurological disorders like Alzheimer's Disease. I am responsible for designing a feasible business model and for identifying target audiences and ensuring the affordability and reach of our product. I am also responsible for making sure that our research and business is conducted in an ethical manner, such that it is of maximum benefit for society while also being scientifically and financially feasible.

» **Key Achievements:** Got funding from the Meity GENESIS Eir program for the sum of 10 lakhs INR, and was a contestant in the Inter Institute Entrepreneurship Meet organized by IISER Tirupati. We are currently in the process of developing a prototype for our product, and have been accepted into the first cohort of the IISER Kolkata Incubation Center.
